

PRETTY PAIR

As airlines continue to enforce the weight restrictions, what every globetrotting diver needs is lightweight equipment like Saekodive's high performance first-stage (8610) and second-stage (Super X5). The 8610 incorporating two high-pressure ports and four low-pressure ports, has an adjustable balanced diaphragm, along with an intermediate pressure lever that can be tuned externally to suit each divers' preference. Saekodive's Super X5, weighing just 180g, boasts a 30 degree line swivel, and a side-flow design that diverts exhaled bubbles away from a diver's line of vision. Ruggedly constructed yet neutrally buoyant, the

Super X5 reduces jaw fatigue. To add to the list of benefits, the Super X5 gives divers a sleek profile measuring just 6.8cm.

Price: **8610 first-stage (US\$200), Super X5 regulator (US\$350)**
